

healthy-cell flow alignment θ (deg)

- OLD: $\theta^* = 20^\circ$, $\tau = 9$ h (asymptote $\approx 21^\circ$)
- NEW: $\theta^* = 0^\circ$, $\tau_{\text{orient}} = 7.4$ h
- ... ideal $45^\circ e^{-t/7.4}$ (ungated)
- ★ reference imaging $\approx 20^\circ$ @ 6 h

$\theta(6 \text{ h}) = 21.4^\circ$
